1. On Mobile Devices	1
2. On a Laptop or Desktop.....	1

On Mobile Devices

IOS

You can run the mobile version of Aura Time and Aura Approve on an iOS device running the current or previous major iOS version.

For the latest version visit <http://www.apple.com/ios> or

Settings > General > Software Update on your device.

Configure Safari as follows:

- Accept cookies: **From visited**
- JavaScript: **On**

Android

You can also use Aura on devices running recent versions of the Android OS. The mobile version of Aura runs in portrait view only on Android devices. The Aura mobile apps were tested in Chrome on the Samsung Galaxy S6 running Android 5.0.2 (Lollipop).

Note: Due to the fragmentation issues associated with the Android platform, we can't guarantee compatibility with a particular Android device or OS version. The Aura team can commit to investigating only those issues that can be replicated on our current test platform.

On a Laptop or Desktop

The laptop/desktop version of Aura Time and Aura Approve support Safari on the Mac, and Chrome on both the Mac and PC. As with the mobile version, JavaScript must be enabled.
